

## PRAC 2 MEMO

Write a query to show everything stored in the RESIDENTS table. Test the query to see if all the records are returned (i.e. perform a select statement)

```
Select * From RESIDENTS
```

Write a query to show a list of properties available that includes the address, square feet, number of bedrooms and monthly rent amount. Test the query to see if all the records are returned.

```
Select Address,SQR_FT,BDRMS,Monthly_Rent from Property
```

Write a query to show only the property owners that live in Portland. Test the query to see if all the records are returned.

```
Select * from Owner  
Where City = 'Portland'
```

Write a query to show all service requests that have their problems confirmed. Test the query to see if all the records are returned.

```
Select * From Service_Request  
Where Status like 'Problem confirmed%'
```

Write a query to show all properties that have 2 or more bedrooms and have a monthly rent amount under 2500. Test the query to see if all the records are returned.

```
Select * from Property  
Where BDRMS >= 2 AND Monthly_rent < 2500
```

Write a query to show the most hours estimated for a service request. Test the query to see if all the records are returned.

```
Select max(EST_Hours) as MostHours From Service_Request
```
